RUDRAKSH MITTAL

Software Engineering, Full-Stack Development & Applied AI

Bengaluru, Karnataka | +91 8285692725 | rudrakshmittal19@gmail.com | linkedin.com/in/rudraksh-mittal19 | github.com/rudrakshmittal19-star

PROFESSIONAL SUMMARY

I'm a final-year Computer Science (AI & ML) student at CHRIST University. Over the last year I've mostly been building things rather than just studying them: an LLM-based reconciliation tool with a full audit trail, a five-agent pipeline that improves prompts automatically, a full-stack ERP for a coaching institute, and a multimodal model for my final-year project that looks at X-rays, symptoms, and blood reports together. I like picking apart unfamiliar codebases and figuring out how systems actually work. I'm comfortable working across the stack, from the database up to the UI.

CORE SKILLS

Programming: Python, Java, C, SQL, JavaScript/TypeScript
AI / ML: LLM Applications, Prompt Engineering, Multi-Agent Systems, NLP, Predictive Modelling, Deep Learning
Web & Full-Stack: React, Next.js, Node/Express, REST APIs, Supabase, Tailwind CSS
Data Engineering: ETL Pipelines, Automated Data Extraction, Document Processing, Data Cleaning
Databases & Tools: MySQL, MongoDB, PostgreSQL, Git, GitHub, Vercel, Jupyter Notebook

EXPERIENCE

Intern - Founder's Office, SandMartin Consultants Pvt. Ltd., Noida *Oct 2026 - Present*
- Working directly with the founder/president on AI, automation, and technology-driven process improvement initiatives across the business.

AI Intern, HCLTech, Noida *Apr 2026 - Jun 2026*
- Worked on IncidentAI, an internal tool for ServiceNow that automates how incidents get reported, using prompt engineering so the system could turn messy incident data into something structured and usable.
- Put together reusable prompt templates and data models that made it noticeably faster for the support team to pull up the information they needed.

AI Intern, EONMED, Noida (Remote) *Apr 2026 - May 2026*
- Built MediAssist, a chatbot that helps users describe symptoms, upload medical reports, and get conversational guidance back, powered by Gemini.
- Handled the backend myself, setting up Supabase for authentication and storing report data, then deployed the whole thing on Vercel.

Engineering Intern, Droom Technology Pvt. Ltd., Gurugram *Apr 2025 - May 2025*
- Wrote a Python pipeline using PyMuPDF, pdfplumber, and Camelot to pull structured data out of over 1,000 vehicle inspection PDFs that had no consistent format.
- Published the final dataset on Hugging Face so the rest of the engineering team could use it for analytics and ML work.

PROJECTS

Settlement Reconciliation Agent | Next.js, Supabase, Groq API, TypeScript *2026*
- Built this for the Razorpay AI Buildathon. It matches settlement records against merchant ledgers automatically, using simple rule-based logic for the obvious cases, and only sends genuinely ambiguous pairs to an LLM for reasoning.
- Added confidence scores, plain-English explanations, and a full audit trail for every match, because I wanted someone to actually be able to trust and check the automated decisions.

Knowledge Nexus, Student Management ERP | Next.js, Supabase, Groq AI, Tailwind CSS *2026*
- Built a full ERP for a coaching institute to handle student records, attendance, fees, expenses, and faculty/batch scheduling in one place, with role-based access and automated reporting.
- Added a Groq-powered assistant that can answer questions directly from the institute's live data.

AI-Powered Multimodal Medical Diagnosis System | Python, Deep Learning *Final-Year Project*
- Combines chest X-rays, patient symptoms and history, and structured blood-report data to predict disease, instead of relying on just one type of data. It's an academic project built to test whether combining modalities actually helps.

PromptForge, Multi-Agent Prompt Optimization | React, TypeScript, Groq API, SSE *2026*
- Built a five-agent pipeline that takes a prompt, rewrites it, and scores the new version against the original, streaming results live so you can watch each agent work.

CERTIFICATIONS

- Prompt Engineering, Infosys Springboard (Nov 2026)
- Introduction to OpenAI GPT Models, Infosys Springboard (Nov 2026)
- Gen AI 101, NASSCOM FutureSkills Prime (Nov 2026)
- MongoDB Data Modeling Path, MongoDB University (Dec 2025)
- AI-first Software Engineering, Infosys Springboard (Nov 2026)
- OpenAI GPT-3 for Developers, Infosys Springboard (Nov 2026)
- MongoDB Python Developer Path, MongoDB University (Jul 2025)
- IBM Cognos Analytics, IBM Cognitive Class (Jul 2025)

LEADERSHIP & ACTIVITIES

- Overall Coordinator & Sports Media Head, Devadan Cup 2025, CHRIST University. Led digital media coverage and on-ground coordination for the university's annual sports fest.
- Volunteer to Program Coordinator (POC), Centre for Social Action (CSA). Started with health awareness campaigns and blood donation drives, then grew into leading outreach initiatives with schools, NGOs, and special education institutions.
- Finalist, SAP Labs Vibethon (College Edition). Built an AI-powered smart event management platform, shortlisted among competing student teams.
- Participant, NASA International Space Apps Challenge, CHRIST University (Kengeri Campus). Team ExoSky (Aug 2025).

EDUCATION

CHRIST (Deemed to be University), Bengaluru *2023 - 2027*
B.Tech Computer Science Engineering (Artificial Intelligence & Machine Learning) | GPA: 3.40 / 4.0 (8.50 / 10)

Presidium School, Indirapuram (CBSE)
Class XII: 76% (2023) | Class X: 93% (2021)
